

GTIS Field Systems is part of the SIL International Global Technology and Information Services (GTIS) team, based in Waxhaw, North Carolina, USA. (On the JAARS Campus.) We are experts in radio and satellite communications and solar power for computers, projectors, phones and communications equipment.

We can help you with:

- Portable solar power for phones, tablets or laptops
- Small custom solar power systems for "village" use
- Large custom solar or generator systems for a home or "center"
- UPS systems, large or small
- Electric generator troubleshooting and purchasing
- Technical review of electrical contractor's proposals
- Handheld sat-phones for voice calling
- BGAN satellite terminals for email and Paratext syncing
- Starlink satellite terminals for video conferencing and internet access

We Partner to Energize Language Development & Empower Bible Translation

We serve SIL, and global strategic **partners in Bible translation**, specifically those who live in remote locations where electric power and communications are unavailable or unreliable.

Ways we can help you:

1. **Learn** – Self-Help is free on our website
<https://power.sil.org>

- Learn about electricity basics and how to design a solar power system
- Discover low power laptops and projectors for off-grid use
- Find reliable equipment to fit your unique needs
- Learn all about batteries

2. **Get Tech support!** – Technical

advice & consulting services can be just an email away: power_systems@sil.org

3. **Plan for your project needs**

- Shave years off your translation project by eliminating dead computer batteries and wasted time
- Video conference with language consultants over a satellite Internet connection
- We can help you plan and budget for power and communications equipment
